

★ DOD - CULTURAL AWARENESS

SIMULATION: THE NEXT STEP IN LEADER ENGAGEMENT TRAINING

post-war Iraq. Our forces are now engaged in challenging urban situations typical of the three-block scenario. Negotiating effectively in sensitive situations will have a positive influence on outcome and on reducing losses. To achieve peak performance from our troops, they need to be properly prepared and ready for anything.

Interpersonal-skills, negotiation, and cultural training are critical for ensuring the Army, Marines and National Guard units and leaders are prepared to communicate and succeed in

SIM MASTERY SYSTEM™

The CompeteNet SimMastery system takes military simulation to the next level by developing interpersonal skills experientially to create a better understanding of cultural differences, biases and nuances. The key to the success of this methodology is realistic video-based simulated scenarios, deployed over the Web or via CD, in which soldiers learn from first-hand experience to master the critical skills they need. CompeteNet simulations feature an expanded AAR solution to successfully change behavioral reaction. Whether cultural, political, or situational, the SimMastery system ensures trainees master new skill sets, apply knowledge, and build confidence consistently, quickly and at the highest level of quality.

Interpersonal-skills simulation can be applied to a wide variety of military applications:

- ▶ Negotiations
- ▶ Cultural Awareness
- ▶ Screening
- ▶ Interrogation
- ▶ Medical Assessment & Treatment
- ▶ Military & Civilian Interactions
- ▶ Recruiting & Counseling
- ▶ Emergency Information
- ▶ Military Law Enforcement
- ▶ Trauma Management

Measuring Progress, Assessing Performance and Meeting Goals:

Training is not complete without an assessment of results. The SimMastery system uses techniques to collect and analyze data on soldier performance. Reports can be generated and customized based on requirements.

Applications for SimMastery:

The SimMastery system can be designed for any number of scenarios, and questioning can branch in various ways depending on the objectives required. SimMastery is ideal for training cultural and situational awareness, adaptive thinking, or even conflict resolution. It provides soldiers the opportunity to practice their skills in a realistic and safe environment. It gives trainees the ability to take risks, be challenged, and correct personal behavior, before immersion into actual life-threatening situations. Most importantly, it exposes weaknesses in crucial disciplines to the chain of command and provides immediate feedback to each soldier in an engaging and realistic manner.
